Packaging line for powdery products SDP/S 3000 A

We produce CANS / TUBES according to individual customer requirements. The packages are made of cardboard glued with a thickness of ~1.1 mm. The inside of the tubes can be lined with paper, polyethylene foil or aluminum foil. The aluminum foil layer provides excellent barrier properties of the packaging, maintains the aroma and ensures a long shelf life. Tubes can be equipped with an aluminum membrane that provides protection against accidental opening. CANS / TUBES are closed from the top with a lid made of plastic or metal, depending on the customer's needs. From the bottom, they are closed with a press-in bottom or a bottom designed for wrapping on a machine. We make prints on CANS / TUBES up to 8 colors.
